

Tombstone Territorial Park lies just south of the Arctic Circle in the Ogilvie Mountains of central Yukon. The Dempster Highway provides access to the park which features diverse habitats including forested river valleys, small lakes and ponds, rich wetlands, alpine and arctic tundra, and rugged mountain tops. The Tombstone wilderness is well known as one of the best places in North America to view subarctic breeders such as Gyrfalcon, Surfbird, Long-tailed Jaeger, Northern Wheatear, and Smith's Longspur.

This checklist summarizes the occurrence and breeding status of 148 species which have been recorded in Tombstone Territorial Park and vicinity. Breeding has been confirmed for 38 species. Species names and taxonomic order follow the A.O.U. checklist (1998) and supplements.

The book *Birds by the Dempster Highway* by the late Robert Frisch is an essential reference for visitors to the Tombstone area. Information on the region's birdlife is also provided by staff at the Tombstone Interpretive Centre.

#### FREQUENCY and BREEDING CODES

- r **Rare:** expected annually, but easily missed.  
ca **Casual:** at least two records but not seen every year.  
ac **Accidental:** recorded only once.  
w **Winter:** expected annually in winter (Dec 1 – Feb 28).  
\* **Confirmed Breeding:** Observations of an active nest or dependent, flightless young.

#### DOCUMENTING BIRD SIGHTINGS

This checklist was compiled using the Birds of the Yukon Database (Canadian Wildlife Service, Whitehorse). Contribute to our knowledge of the Yukon's birdlife by sending field notes including written or photo documentation of rare, casual, or accidental species or those not on the checklist, and details of breeding observations to:
